Refat Othman Abdulwahed

Software Engineer — Frontend & Full-Stack (React / Next.js / TypeScript)

refatabdalwahed@gmail.com • +963 992 841 193 • Damascus, Syria • github.com/Refat12345

PROFILE

Software Engineer (B.Sc.) with 3+ years of experience shipping production web applications used daily by real businesses — from a healthcare platform managing **500+ patients** across multiple medical centers to a **full-stack ERP system** (~44,000 lines of TypeScript) running live on a self-managed Linux server. Strong in React and Next.js with end-to-end ownership: database design, secure APIs, role-based access control, automated testing, CI/CD, and production deployment. Experienced in remote Agile teams and **AI-accelerated development workflows**.

KEY PROJECTS

Steel Factory ERP — Full-Stack Enterprise Resource Planning System

2025 – Present

Sole developer — designed, built, and operates the system end-to-end (in production)

- Built a production ERP covering the factory's full workflow — contracts, sales orders, truck weighing & loading, billet purchasing, payments, finance, and reports — with an Arabic RTL interface usable on factory-floor phones and desktops.
- Designed a PostgreSQL schema of **28 relational models** with Prisma, using serializable transactions with automatic retry and exact decimal arithmetic for all financial calculations.
- Implemented fine-grained **RBAC with a 3-layer defense** (middleware, server layouts, per-page checks), per-user permission overrides, login rate limiting, and a transactional audit trail on every write operation.
- Enforced a clean service-layer architecture (thin API controllers, Zod validation shared client/server, structured pino logging) across **~44K lines of strict TypeScript**, backed by **33 Vitest test suites** and a GitHub Actions CI pipeline.
- Deployed and operate the system on an Ubuntu VPS: PM2, Nginx, HTTPS, health-check-gated deploys with automatic rollback, and verified off-site database backups.
- Leveraged AI-assisted development with rigorous review, testing, and guardrails to deliver enterprise scope solo.

Stack: Next.js (App Router) · React 19 · TypeScript · PostgreSQL · Prisma · NextAuth · Tailwind CSS v4 · shadcn/ui · Zod · Vitest · GitHub Actions · PM2 · Nginx · Ubuntu

Daamkom Hayat — Dialysis Centers Management System

Oct 2023 – Oct 2024

Union of Charitable Associations, Damascus — Frontend Lead

- Led frontend development of a React.js platform managing **500+ patient records** across multiple dialysis centers, with real-time synchronization between frontend and backend services.
- Built patient management and appointment-scheduling modules; optimized rendering performance and delivered a responsive, cross-browser UI.
- Contributed to database architecture and translated the organization's real-world workflows into technical requirements in direct collaboration with stakeholders.

Stack: React.js · Redux Toolkit · REST APIs · Tailwind CSS

PROFESSIONAL EXPERIENCE

Frontend Web Developer (Remote)

Oct 2024 – Apr 2025

Germany-based development group — remote, international team

- Built and optimized responsive web applications with React.js, JavaScript (ES6+), and Tailwind CSS.
- Integrated RESTful APIs and Firebase services; improved frontend performance and page load times.
- Developed reusable, accessible UI component libraries following component-based architecture principles.
- Worked in an Agile remote workflow: Git branching, code reviews, and iterative delivery across time zones.

EDUCATION

B.Sc. in Software Engineering

Sep 2019 – Oct 2024

Damascus University — Faculty of Informatics Engineering

SKILLS

Languages	TypeScript · JavaScript (ES6+) · SQL · HTML5 · CSS3
Frontend	React · Next.js (App Router, Server Components) · Redux Toolkit · Zustand · React Hook Form · Tailwind CSS · shadcn/ui · Responsive & RTL Design · Accessibility
Backend & Data	Node.js (Next.js API routes) · PostgreSQL · Prisma ORM · REST API design · NextAuth (JWT) · Zod validation · Firebase
Quality & Testing	Vitest · Jest · React Testing Library · TypeScript strict mode · structured logging (pino)
DevOps	Git & GitHub · GitHub Actions CI · Linux (Ubuntu) · Nginx · PM2 · automated backups & deploy scripts
Ways of Working	Agile/Scrum · remote collaboration · AI-assisted development (Cursor) · stakeholder communication
Spoken Languages	Arabic (native) · English (professional working proficiency)
